

# About Metalogix

Metalogix moves, manages and protects content that lives within and around Microsoft SharePoint, Exchange and Office 365. We ensure that your business has the freedom to collaborate without the risk of information loss, no matter what platform, on-premises or in the cloud.

# Move, Manage, Protect

SharePoint and Office 365

## Planning

There's more to migration success than just moving content. Knowing your starting point is the best investment you can make. Our solutions reduce the time and cost associated with identifying and executing the way forward.

## Migration

If anyone tells you that migrating SharePoint or Office 365 is simple, then they probably haven't seen enough of them or been doing it long enough. We have, and we've seen it all. The good news? They may be complex, but they don't have to be painful.

## Security

Today's collaboration platforms must provide the flexibility of features that users demand and the control and safety that your sensitive content needs. We help you strike the balance whether you are working on-prem or in the cloud.

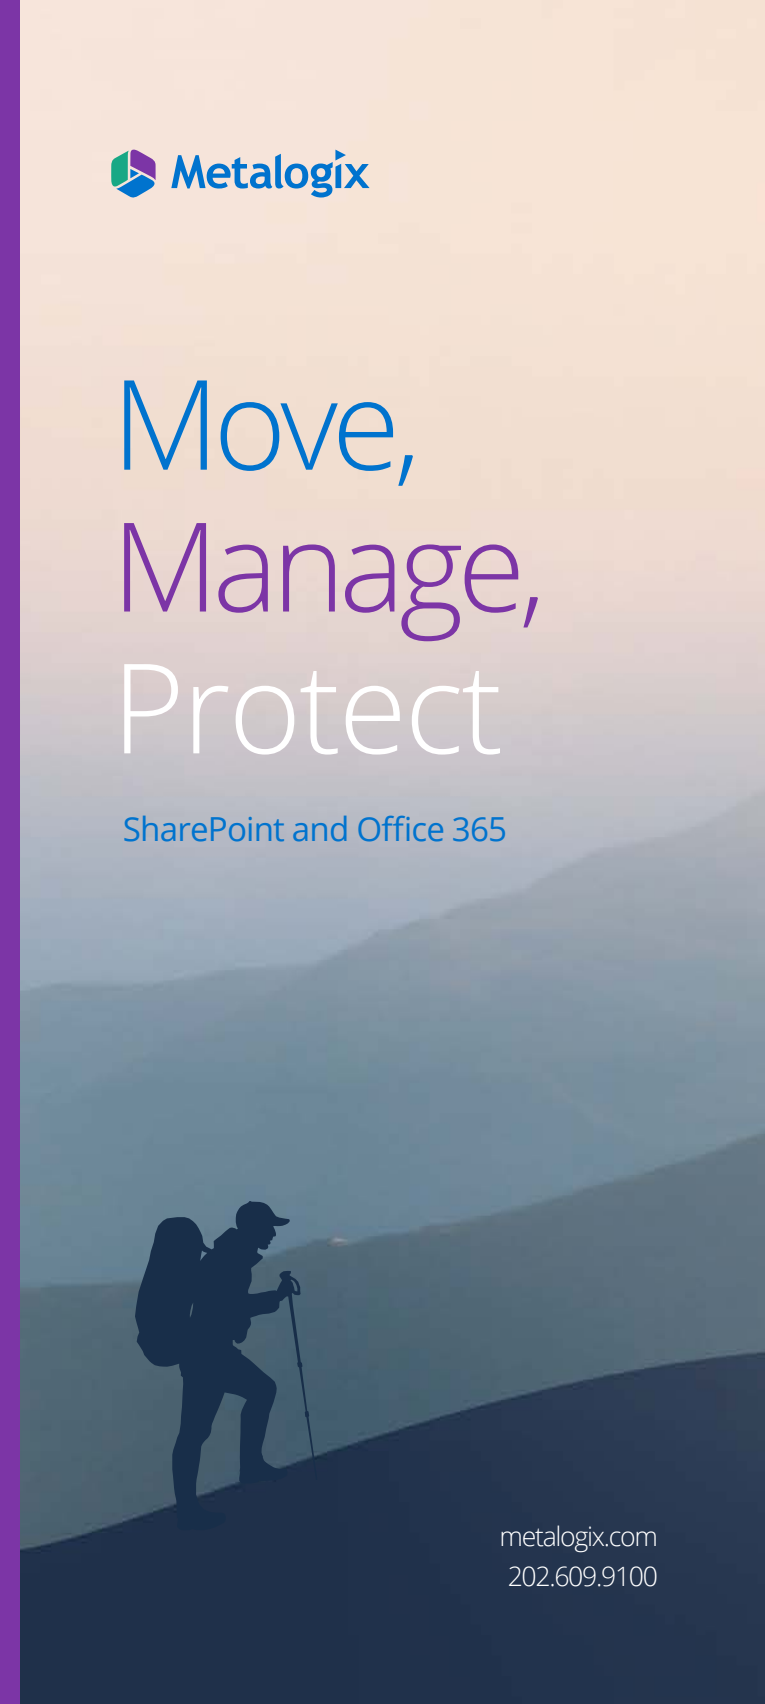

## Archive

Reduce the size of expensive databases by up to 98%, improve searchability, simplify archiving and slash storage costs. Juggle the demands of IT, legal and users and keep everyone happy using our solutions.

## Performance

End users expect to be able to access their content quickly and easily in the cloud or on-premises. It's not where content resides that makes collaboration effective; it's removing the barriers that hinder access.

# Move »

## Content Matrix

The most powerful and flexible SharePoint and Office 365 migration solution.

## Essentials for Office 365

The complete solution for pre-migration analysis and migration to Office 365.

## Essentials for Drives
